**V**

vibrissa movements 300

**W**

water intake 231  
working capacity 91

**Y**

yohimbine 160

## Instructions to Authors

1. Papers will be published in **English, French or German.**

2. Authors should submit **manuscripts together with two copies.** The original illustration material (original drawings etc.) and two copies should be submitted together with the manuscript.

3. The text should be as **clear and concise** as possible. Both form and content of the paper should be carefully checked to exclude the need for corrections in proof. A charge will be made for changes introduced after the manuscript has been set in type.

4. **Manuscripts** should be typewritten, double-spaced, on one side of letter size paper and with wider margin on the left. All pages should be numbered consecutively. Tables, footnotes and legends for illustrations should be typed (double-spaced) on separate pages. Use the metric system for text and figures.

5. The **first page** should bear:

- a) the title;
- b) the name(s) of the author(s);
- c) the name of the laboratory where the work was carried out;
- d) a running title of not more than 67 typewriter strokes;
- e) footnotes to the title (marked by asterisks).

6. Each paper should be preceded by a brief **abstract** in English concerned with the methods used and with the experimental results which should be presented in such a way that it is possible for the reader to assess their significance. It should be as short as possible and should **not exceed 200 words.**

French and German articles should also have an English translation of the title.

7. Immediately following the abstract, some relevant **key words** should be supplied for subject indexing.

8. Articles dealing with **original investigations** should first state the problem concisely and arrange the material under Methods, Results, Discussion, References.

9. **Footnotes** should be kept to a minimum and numbered consecutively throughout the paper. Footnotes referring to the title or authors of the article are to be marked by asterisks.

10. The **bibliography** should include only work cited in the text. References should be listed alphabetically at the end of the paper as follows: *journal papers*—names and initials of all authors, full title, journal abbreviated in accordance with World Medical Periodicals, volume number, first and last page numbers, year in parentheses; *books*—names of authors, full title, edition, place, publisher, year. *Examples:*

Latz, A., Bain, G. T., Kornetsky, C.: Attenuated effect of chlorpromazine on conditioned avoidance as a function of rapid acquisition. *Psychopharmacologia (Berl.)* **14**, 23—32 (1969).

Fisher, S., Cole, J. O., Rickels, K., Uhlenhuth, E. H.: Drug set interaction: The effect of expectation on drug response in outpatients. In: *Neuropsychopharmacology*. Bradley, P. B., Flugle, F., and Hoch, P., eds., vol. 3, pp. 149—156. Amsterdam: Elsevier 1964.

Several publications by the same author or group of authors should be listed in chronological order; those that appear in the same year should be distinguished by the suffixes a, b, c etc. Citations in the text should be given in parentheses, e.g. (Bindra and Mendelson, 1963) or (Beckman, 1958; Brown, 1963), except when the author's name is part of a sentence, e.g. "Man (1966) reported that . . ." When a paper with more than two authors is cited, all authors are named the first time, but subsequently only the first author, e.g. (Miller *et al.*, 1963).

11. Figures should be separated from the text and numbered. They should be restricted to a minimum. Descriptions in captions should not be expanded in the text, nor should the same data be given in both graph and table form. Coloured or previously published illustrations are not usually accepted. Original drawings and graphs should be drawn in Indian ink with lines of uniform thickness. It must be emphasized that a maximum area available is 108 × 177 mm ( $4\frac{1}{4} \times 7''$ ). Inscriptions should allow for any reduction in scale—a capital letter should be about 1.8 mm high in the final version. If figures have to be redrawn for the blockmaker, this may cause considerable delay in publication. Photographs should be sharp, well-contrasted glossy prints at right angles. Authors should mark them with Letraset (Instant Lettering).

## A new encyclopedic publication

How is the information contained in an environmental stimulus converted into meaningful responses by an organism? How does an organism perceive the outside world, its energy fields in space and time, and transform it into purposeful reactions? These are central themes of sensory physiology. The Handbook of Sensory Physiology will compile authoritatively the present state of our knowledge in this regard.

The first volume is directed to the general principles of sensory biology. Written by world authorities in their fields, the volume deals with questions such as transduction of energy by receptors, reaction of membrane molecules to stimuli, the generation of nerve impulses, encoding of information, processing of information by the nervous system, and the making of neuronal circuits.

The quest for general principles calls for a varied strategy. Thus the questions are illuminated from various points of view and analyzed with various techniques. The contributors are physiologists, physicists, chemists, geneticists and psychologists. All this is a reflection of the fact that sensory biology has become a meeting ground for many scientific disciplines.

The book provides an up-to-date account of the known facts as well as the open problems in the field. It will undoubtedly become a standard reference book for the workers in neural and behavioral sciences, for the scientist and the advanced graduate student.

Editorial Board:  
Professor Dr. H. Autrum,  
München; Professor Dr. R. Jung,  
Freiburg; Professor Dr.  
W. R. Loewenstein, New York;  
Professor Dr. D. M. Mac Kay,  
Keele, Staffordshire (GB);  
Professor Dr. H. L. Teuber,  
Cambridge, MA, U.S.A.

## Outline

**Vol. I: Principles of Receptor Physiology**

**Vol. II: Somato-Sensory System**  
Edited by A. Iggo

**Vol. III: Part A: Enteroceptors**  
Edited by E. Neil  
**Part B: Muscle Receptors**  
Edited by C. C. Hunt  
**Part C: Electrosensation and Other Unusual Senses of Lower Forms.** Edited by A. Fessard

**Vol. IV: Chemical Senses**  
Edited by L. M. Beidler

**Vol. V: Auditory System**  
Edited by W. D. Keidel, W. D. Neff

**Vol. VI: Vestibular System**  
Edited by H. H. Kornhuber

**Vol. VII/1: The Photochemistry of Vision.** Edited by H. J. A. Dartnall

**Vol. VII/2: Physiology of Photoreceptor Organs.**  
Edited by M. G. F. Fuortes

**Vol. VII/3: Central Processing of Visual Information.**  
Edited by R. Jung

**Vol. VII/4: Visual Psychophysics**  
Edited by L. M. Hurvich,  
D. J. Hurvich

**Vol. VIII: Perception**  
Edited by H.-L. Teuber

**Springer-Verlag**  
Berlin  
Heidelberg  
New York
